THE EXPLORATION OF SPACE

edited by Robert Jastrow

illustrated, \$5.50

Van Allen discusses the geomagnetically trapped corpuscular radiation; Christofilos reports on "The Argus Experiment;" de Vaucouleurs, on Mars and Venus; Goldberg, on astronomy from satellites and space vehicles; Whipple, on solid particles in the solar system. Other vital topics include rocket astronomy, plasma and magnetic fields in the solar system, the U. S. space-exploration program, and the U.S.S.R. report of an active volcano on the moon.
