

POSITIONS OPEN

SOLID-STATE PHYSICIST OR PHYSICAL METALLURGIST

APPLIED RESEARCH on a broad spectrum of solid-state sensors for measuring temperature, pressure, flow, radiation (visible and infrared) and other physical quantities in industrial and aero-space applications.

OPPORTUNITIES for challenging theoretical and experimental work include investigations of materials exhibiting photoconductive, photovoltaic, thermoelectric, piezo-magnetic and piezo-resistive effects.

REQUIREMENTS: Advanced degree in any one of the related disciplines and a record of accomplishment indicating creativity and a capacity to develop ideas into useful products.

PLANT LOCATION makes available the educational, cultural, recreational, and suburban living advantages of the Boston area.

*Write in confidence to Mr. H. E. Crabtree,
Manager-Engineering Administration.*

An equal opportunity employer

ENGINEERING—PHYSICIST

Teaching and Research Ph.D. Engineer-Physicist needed in some of the following areas: Dynamics, Statics (including theories on elasticity and visco-elasticity), Heat and Thermodynamics, Electricity, Physical Optics, and "Modern Physics." This is a staff and faculty appointment in our graduate school program. Write for information, academic catalog, and application form to:

resonance spectra, and advances in experimental techniques will be among the subjects considered at the conference.

Abstracts, which are due not later than February 1, 1962, and requests for details concerning the meeting should be sent to the Conference Secretary, Professor W. Low, Department of Physics, The Hebrew University of Jerusalem, Israel.

Semiconductor Physics

ENGLAND'S University of Exeter will act as host to the sixth in a series of international conferences on the Physics of Semiconductors to be held July 16-20, 1962, under the sponsorship of the British Institute of Physics and Physical Society, the International Union of Pure and Applied Physics, and the British National Committee for Pure and Applied Physics of the Royal Society. The previous conferences were held in Reading (1950), Amsterdam (1954), Garmisch (1956), Rochester (1958), and Prague (1960). Further information regarding the conference may be obtained from the Administration Assistant, The Institute of Physics and Physical Society, 47 Belgrave Square, London, S.W. 1, England.

Radiation Effects

POSSIBILITIES for providing partial support to qualified applicants wishing to attend the Second International Congress of Radiation Research (Harrogate, England, August 6-11, 1962) are being explored by the Radiation Research Society and the National Academy of Sciences—National Research Council. Application forms, which must be submitted prior to February 1, are available from the NAS-NRC Committee on Travel Grants, Room 319, 2101 Constitution Avenue, N.W., Washington 25, D. C.

The scope of the congress will include research into the physical, chemical, and biological effects of ionizing radiation. Dr. A. Howard, Mount Vernon Hospital, Northwood, Middlesex, England, has been designated secretary general of the Congress, and will receive all requests for information concerning the meeting.

Rheology Congress in 1963

AN invitation to submit papers for presentation at the Fourth International Congress on Rheology has been issued by the meeting's sponsoring bodies, the Society of Rheology and the International Committee on Rheology. To be held August 26-30, 1963, at Brown University, the meeting's program will include several invited lectures.

Contributions, in the form of 500-word abstracts, must be submitted by March 30, 1963, to Professor E. H. Lee, Editor of the *Proceedings* of the Fourth International Congress on Rheology, Brown University, Providence 12, R. I. Accommodations and meals will be available at the University.

Requests for additional information regarding the conference should be addressed to Professor R. S. Rivlin, also at Brown University.
