

#### **Helium Research Dewars**

Hofman Model HLOR helium dewars for optical applications are designed for applications requiring visual observation of helium cooled detectors. The dewar pictured above has a 1-liter helium capacity and is designed to be used with a wide variety of detectors. These convenient dewar configurations are particularly applicable to research on:

Low Temperature Observation and Fluorescence Measurements

Optical Maser Research Cooling of Infrared and Ultra-Violet Detectors Photoconductivity Measurements X-Ray Studies

#### WE HEAR THAT

Joseph Kaplan, professor of physics at the University of California at Los Angeles, has been elected to succeed V. V. Beloussov of the Soviet Union as president of the International Union of Geodesy and Geophysics. Results of the election were announced at the close of the organization's 13th General Assembly, which was held in Berkeley during the latter part of August.

Nicholas Kurti of the Clarendon Laboratory will serve during the current semester as Buell G. Gallagher Visiting Professor at the City College of New York. Daniel Greenberger of the University of California's Lawrence Radiation Laboratory has joined the CCNY Physics Department as an assistant professor.

Recent promotions in the University of Maryland's Department of Physics and Astronomy include those of Hans Griem and William MacDonald from associate professor to professor of physics and of O. W. Greenberg and Phillip Steinberg from assistant professor to associate professor. The department has also announced the appointment of J. R. Shakeshaft of Cambridge University as visiting professor of astronomy for the current semester. Dr. Shakeshaft, a specialist in radio astronomy, is visiting the United States under the sponsorship of the American Astronomical Society. Albert Altman of the University of Virginia and Frank C. Young from the Naval Research Laboratory have been appointed visiting assistant professors of physics, and Noboru Tsuya, former research professor at Tohoku University, Sendai, Japan, has been appointed visiting research associate in physics at Maryland. Newly appointed associate professors of physics are Carroll O. Alley, Jr., formerly assistant professor at the University of Rochester's Institute of Optics, and N. Sanders Wall, an experimental nuclear physicist who has been in charge of cyclotron activities at the Massachusetts Institute of Technology. Dr. Wall is currently in Cambridge on leave of absence and is expected to join the Maryland staff next year. Elske van Panhuys Smith, until recently a visiting fellow at the Joint Institute for Laboratory Astrophysics in Boulder, Colo., has been appointed associate professor of astronomy in the Maryland department.

S. T. Epstein, formerly of the University of Nebraska, has received a joint appointment as professor of physics in the Department of Physics and the Institute of Theoretical Chemistry at the University of Wisconsin, L. G. Pondrom from Columbia has joined the Wisconsin Physics Department as an associate professor. Within the Department, C. H. Blanchard has been promoted to professor, L. W. Anderson, A. M. Bincer, and K. W. McVoy have been named associate professors, and R. R. Borchers has become an assistant professor. Two professors are on leave of

# **DECISIVE THOUGHT**

Operations Research Incorporated holds major responsibilities in system analysis, program planning and evaluation, reliability monitoring and prediction systems, and management information systems design/implementation. ORI engineers and scientists are helping bring new dimensions to decision-making for executive planners in NASA, other government agencies, the military services, and—to an increasing extent—private industry.

As a result of ORI's broad success in meeting demands of decision-makers, we can now offer careers of high challenge and exceptional potential to systems-oriented engineers and scientists, applied mathematicians, analytical physicists, and electronic engineers. Your assignments, often of national importance, will let you work with top-level technical and management people in industry and government. You will find your colleagues at ORI to be leaders in their fields, and the ORI atmosphere to be thoughtful and scientist-oriented (all the chief executives and team leaders are scientists). To learn more about these

opportunities for rapid personal and professional growth, contact Mr. C. A. Robinson, Professional Staffing, Operations Research Incorporated, 8605 Cameron Street, Silver Spring, Maryland. (Residential Suburb of Washington, D. C.) An equal opportunity employer.

#### Openings with ONR

## High-level scientific liaison

One unique and vital function of the Office of Naval Research is to keep abreast of, and help develop, scientific research wherever and however it may ultimately benefit the Navy. Since this requires participation in the scientific community at the highest professional level, only those persons with their PhD and a broad research background can be accepted.

Two research scientists are needed in ONR's New York City office to provide liaison for basic research programs with universities and laboratories in the Middle Atlantic States. Consideration will be given to qualified applicants in these fields:

- METALLURGY
- SOLID-STATE PHYSICS
- ENGINEERING PHYSICS
- COMMUNICATIONS
- BIONICS
- APPLIED MECHANICS

Salary initially will be \$11,150 (\$11,725 after January 1st) or \$12,845 (\$13,615 after January 1st) depending upon your qualifications. Periodic increases may take you as high as \$14,805 and \$17,215 respectively . . . plus the many benefits of Career Civil Service. Moving expenses within authorized limits will be paid.

Send complete qualifications to Dr. John E. Flynn, Chief Scientist:

office of naval research
207 West 24th Street, New York 11, N.Y.

absence, W. D. Walker will work at the Rutherford High-Energy Laboratory during the fall semester, and R. Rollefson continues on leave as Director of International Science Affairs with the State Department.

John A. Pople of the National Physical Laboratory, Teddington, England, will serve during the 1963-64# Macademic year as a Carnegie professor of chemical physics at the Carnegie Institute of Technology.

Morton F. Kaplon, director of the Cosmic Ray Group of the University of Rochester's Department of Physics and Astronomy since 1957, has been named associate dean of the University's College of Arts and Sciences. Professor Kaplon will retain his post as associate director of the University's Space Sciences Center. The University has also announced that W. Beall Fowler and Arthur H. Vaughan have been named to receive the 1963–64 Eastman Kodak Scientific Awards of \$1000 for graduate work in physics. Eastman Kodak fellowships for graduate study have been awarded to Anna Julia Calpacas and Jack Mochel.

Sol H. Krasner, formerly with the Nuclear Physics
Branch of the Office of Naval Research, has been named
dean of students in the Division of the Physical Sciences
at the University of Chicago. He succeeds Harold R.

Voorhees, who will continue at the University as
emeritus professor to coordinate government fellowship programs and to serve as consultant to the dean.
Dr. Krasner will also serve as professorial lecturer in
the Department of Physics. The University has also
announced that William H. Reid has been named to
receive the first joint faculty appointment in its Departments of Geophysical Sciences and of Mathematics.
Dr. Reid, a specialist in hydrodynamic theory, was
named associate professor. He was previously associate
professor of applied mathematics at Brown University.

Dwight E. Gray, scientific liaison officer in the National Science Foundation's Office of Scientific Information for the past eight years, has returned to the staff of the Library of Congress, where he has been named chief of the Science and Technology Division. Prior to joining NSF in 1955, Dr. Gray headed the Library's former Technical Information Division (now the Defense Documentation Center in Arlington, Va.)

Arnold J. F. Siegert, professor of physics at North-western University, is continuing on leave during the present academic year. He will work in the Department of Physics at the Weizmann Institute of Science in Rehovoth, Israel, as a National Science Foundation senior postdoctoral fellow. The first part of his two-year fellowship was spent at the University of Amsterdam's Institute of Theoretical Physics.

Sanford C. Sigoloff has recently been elected a vice president of Electro-Optical Systems, Inc., in Pasadena, where he will continue to serve as corporate manager of operations. Russell A. Temple has been named manager of optical design and fabrication. Dwain B. Bowen has been promoted from associate manager to manager of the Quantum Physics Division and has been

### ALPHA PRECISION MAGNETS and COILS

#### of superior efficiency at LOWER COST

#### MODEL AL9500 NEW SIX INCH DIAMETER ELECTROMAGNET

The Model AL-9500 is a newly designed electromagnet using a one-piece frame cast of high grade, low carbon magnet steel. Pole faces are ground to tolerances better than a thousandth of a cm to produce fields of excellent homogeneity. A variety of pole caps to provide gaps from ½" to 3", and larger pole caps (over 6"), as well as tapered pole caps to ½", are readily available. Special pole cap arrangements such as are required for Curie & Gouy susceptibility investigations can be furnished, as well as pole caps with holes through the center for Faraday rotation experiments.

Pole caps can be changed in less than a minute, and shims can be provided to vary gap dimensions with the tapered pole caps. The new magnet is equipped with 4 aluminum strip wound coils which utilize the highest grade mylar and epoxy insulation. An exclusive ALPHA water cooling system allows very high magnetic fields to be obtained, and also prevents a large temperature rise in the magnet iron structure.

netic fields to be obtained, and also prevents a large temperature rise in the magnet iron structure.

The magnet is mounted on a supporting stand at a 45° angle to permit ready access for NMR and EPR probes and Dewar flasks from above. The pole faces are aligned for maximum homogeneity with ALPHA'S AL-67 Nuclear Magnetic Gaussmeter, and a variety of matching power supplies are available on short delivery.

livery.

One pair of 6-inch diameter pole caps are furnished as standard. These may be chosen with 2", 1", or 34" spacing. Using the 6-inch 34" spaced pole caps, the field is 12,000 gauss with a homogeneity of one part in 100,000 over a volume exceeding one cubic cm.

Model AL-7500 Magnet

#### 4-inch, High Homogeneity Magnet, with Stand—\$585.00

Aluminum strip windings for high efficiency—current sheet design, 95% filling factor, 10,000 gauss with 4" pole caps, 1" gap. 6" pole caps in ½" to 2" spacing. Tapered 3", 2", 1" and ½" pole caps with spacing of ¼" to 2". 15,000 gauss with 2" x 0.5" pole caps. Used for NMR, EPR work. Pole caps for susceptibility measurement, magnetic beam deflection, and Faraday rotation available. Water cooling optional for high fields. Matching power supply \$395.00

2,000 Gauss, High Homogeneity
ix Inch Electromagnet with Stand \$1980.00

##r Supplies — Optional Choices depending on field

1. AL100-20-C Regulation 1 part 10<sup>3</sup> \$1375.00 (20 ampere)

2. AL100-20-A Regulation 1 part 10<sup>3</sup> 1685.00 (20 ampere)

3. AL100-50-C Regulation 1 part 10<sup>3</sup> 3255.00 (50 ampere)

4. AL100-50-A Regulation 1 part 10<sup>3</sup> 3745.00 (50 ampere)

(Consult the Alpha general catalog for detailed specifications)

ALPHA SCIENTIFIC LABORATORIES, INC.

P.O. BOX 333, BERKELEY 1, CALIF.

# RCA's DAVID SARNOFF RESEARCH CENTER INVITES INQUIRING SCIENTIFIC MINDS TO PROBE INTO ELECTRONIC FUNDAMENTALS

RCA Laboratories located in Princeton, New Jersey, is the research headquarters for the Radio Corporation of America. The major emphasis at the Laboratories is on solving fundamental problems with a large percentage of the research program devoted to electronic materials and devices.

The Laboratories' steady rate of growth presents an opportunity for both experienced graduates and advanced-degree candidates in Physics, Chemistry, Mathematics and Electrical Engineering to take part in research in the following areas:

 MATERIALS SYNTHESIS — Exploratory synthesis and crystal growth of new electronically active materials.

- SOLID STATE DISPLAYS Interdisciplinary research in image presentation, electroluminescence and photoconductivity.
- PROGRAMMING RESEARCH—Investigation into algebraic manipulation, compiler technique, formulation of executive and monitor routines.
- PLASMA PHYSICS Theoretical and experimental studies in the gaseous and solid state.
- THEORETICAL PHYSICS Fundamental research in solid state physics.
- COMPUTER RESEARCH Emphasis on superconductive devices, thin

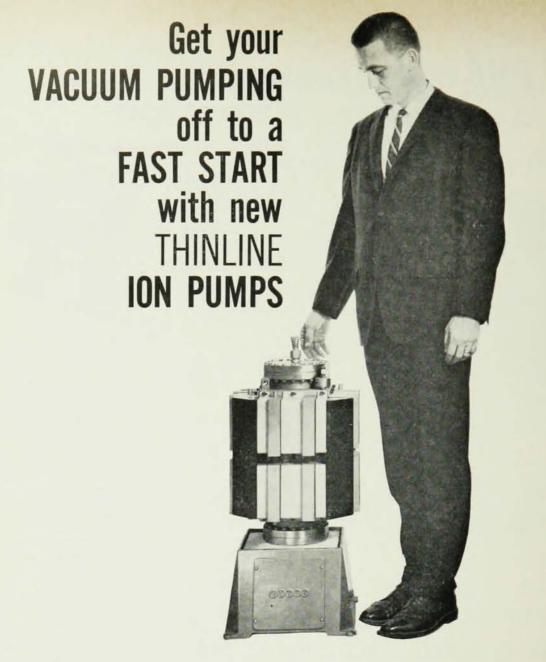

- films, magnetic devices, solid state circuits, and computer theory.
- INTEGRATED ELECTRONICS Investigation of new and novel techniques for constructing and using integrated circuits and devices.
- LASER COMMUNICATIONS Fundamental studies in quantum noise effects, and complex light modulation systems.

You are invited to investigate these and other interesting opportunities within RCA Laboratories by either writing to the Administrator, Graduate Recruiting, RCA Laboratories, Princeton, N. J. or meeting with our representative when he visits your university this Autumn.

An Equal Opportunity Employer

THE MOST TRUSTED NAME IN ELECTRONICS

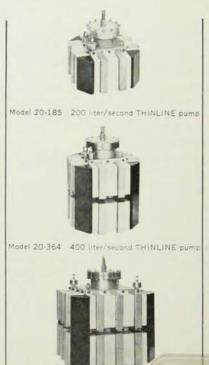

FAST START, FAST PUMPDOWN, FAST CYCLING—a THINLINE 400 liter/second pump, for example, on a 125 liter volume, starts in 3 to 4 minutes at 5 microns (6 to 8 minutes at 10 microns) and pumps down to  $10^{-6}$  in only  $15\frac{1}{2}$  minutes. Rapid starting is afforded by the patented cylindrical anode.

**PATENTED ANODE DESIGN** Improved electrostatic field of cylindrical anode provides more efficient pumping at all pressures.

MINIMUM STRAY FIELD By careful design and use of pole pieces which confine and maximize the field across the pumping elements, Ultek THINLINE pumps produce far less stray magnetic field at the pump inlet than other ion pumps.

SMALLER SIZE, LIGHTER WEIGHT New, Award-Winning Design (WESCON 1963 Award of Excellence) is 1/s lighter, more compact than best competitive designs.

NON-STICK SEXLESS FLANGES New CI VAC "sexless" seals insure easiest asset bly, tightest seal, least maintenance. CI VAC seals are bakeable to 500°C, and compatible with other sexless connection letters.

.15 to 50,000 LITERS CAPACITY Ther a THINLINE pump for every application quiring vacuums of 10-4 through 10-10 to larger sizes and higher ultimate vacuu to order.

Our new THINLINE pump brochure is thin end (12 pages) is that you can read it during cot break, and get some valuable information on puselection, plus specifications. We'd also like to have a copy of our special booklet "A little about almost nothing," which discusses ion puring general and Ultek ion pumps in particular. for data #89.

BOX 10920, PALO ALTO, CALIFORNIA

succeeded in his former post by Paul Fletcher, who was previously in charge of the Division's Laser Department.

The appointment of John T. Wilson as deputy director of the National Science Foundation was announced on July 1. He was formerly special assistant to the president of the University of Chicago.

The Air Force Cambridge Research Laboratories has presented its 1963 Guenter Loeser Memorial Award to Herman Yagoda of the Cosmic Radiation Branch of the AFCRL Space Physics Laboratory in recognition of his outstanding work in geophysics.

The Department of Physics of the University of Florida in Gainesville assumed in September 1962 the responsibility for instruction and research in astronomy. The combined Department of Physics and Astronomy continues under the chairmanship of Stanley S. Ballard; the instructional program in astronomy is under the supervision of Alexander G. Smith. Professors Smith, Guy C. Omer, Thomas D. Carr, and Leon H. Roberts have been given joint appointments in astronomy. Kwan-Yu Chen, recently of the University of Pennsylvania, joined the Florida staff in September 1963 as assistant professor of astronomy. New faculty appointments in physics are as follows: Alex E. S. Green, graduate research professor; Arthur R. Quinton and Richard E. Garrett, associate professors; Bernard Chern and Charles F. Hooper, assistant professors.

New appointments in the Physics Department of the Air Force Institute of Technology, Wright-Patterson Air Force Base, Ohio, include Lt. Col. Eugene Gibb Sharkoff, as assistant professor of physics, and Capt. Gordon Wepfer, as an instructor in the graduate nuclear engineering program.

Billy M. McCormac, former chief of the Electromagnetic Branch of the Defense Atomic Support Agency, is now scientific advisor to the Physics Division of the IIT Research Institute (previously the Armour Research Foundation) at the Illinois Institute of Technology in Chicago.

Maurice Glicksman has been named to succeed Martin C. Steele as director of research in the Tokyo branch of Radio Corporation of America Laboratories. Dr. Steele will be in charge of plasma research in the Microwave Laboratory of RCA's David Sarnoff Research Center in Princeton, N. J. Jules D. Levine of MIT and Wolfram A. Bösenberg, formerly with the RCA Semiconductor and Materials Division, have joined the Center's research staff. RCA's Electron Tube Division in Harrison, N. J., has announced the appointment of Markus Nowogrodzki as manager of microwave engineering programs. He has been succeeded in his previous post as manager of microwave product engineering by Frank E. Vaccaro, formerly manager of microwave applied research. The latter position is now filled by Fred Sterzer.

OCTOBER 1963

# ON THE SEXUAL ASPECTS OF HIGH VACUUM CONNECTIONS

If you're seriously interested in making good connections in the  $10^{-a}$  torr vacuum range and higher, we've got a message for you. But first, may we refresh your memory on old-fashioned vacuum flange connections?

In the beginning, there was the standard male-female fitting.

Squeeze it together, with or without a gasket, and it will do

a fair job of keeping out the atmosphere. But there's a drawback. When you get around to hooking up your system, and look in the flange bin, the parts are either all male or all female.

The next step forward was the sexless connection. Despite its uninspired name, it has some advantages, and gets neatly

advantages, and gets neatly around the problem of which is which. But it has disadvantages too. First, after a thorough bakeout, you'll have trouble opening it up. (We find a chisel helps.) Next, you're stuck with using a copper gasket; copper-nickel or harder stuff will make a mess of that pretty knife edge, as will electro-polishing or chemical cleaning. But all in all, it's still a big improvement over the ones marked "his" and hers."

The next step, which is where we are right now, was the CURVAC seal.\* Like the original sexless seal, it does away with

the one big problem. Happily, it solves all the others too! The engineers who designed it reasoned that when you have two half-toroid surfaces, they meet in a line just as neatly as do two knife-edges. More neatly, in fact. They seal even better, and eliminate virtual leaks completely. They can be used with any gasket material, and can be electro-polished or chemical-cleaned to a fare-thee-well without damaging the edge.

Furthermore, they're compatible with all standard high vacuum equipment, and interchangeable with seals produced by our best competitors. And we've made them available not in just a few sizes, but nine (1" thru 8"), five of which are rotatable.

Would you like to receive, in a plain wrapper, a copy of our enlightening catalog sheet on CURVAC fittings? Send in your name today, or if you're sending in for a friend, send his name. We'll understand. Ask for data # 90.
