

APS Bonner Prize awarded to Feshbach

Herman Feshbach, professor of physics and director of the Center for Theoretical Physics at the Massachusetts Institute of Technology, has been awarded the American Physical Society's Tom W. Bonner Prize in Nuclear Physics for 1973. The prize, which is sponsored by the friends of Tom W. Bonner and the Texas Nuclear Corporation, was presented to Feshbach at the APS spring meeting in Washington.

Upon receiving the award Feshbach was cited for his "contributions to the development of the theory of nuclear reactions, of practical formalisms and methods designed to be most useful to experimentalists and data analysts." Among the achievements for which he received the award are "methods of analysis of neutron-induced reactions, formalisms permitting the analysis and exploitation of the optical model for both direct and compound nucleus processes, and the introduction of 'doorway states' and their connection with intermediate structure."

Feshbach received his SB degree from the College of the City of New York in 1937 and his PhD from MIT in 1942. Initially employed by MIT as an instructor in the physics department in 1941, Feshbach has remained there ever since, serving successively as as-

FESHBACH

sistant professor, associate professor and professor. He is co-author of the text *Methods of Theoretical Physics* (1953), written with Philip M. Morse, and *Fundamentals of Nuclear Theory*, now being published by John Wiley and Sons, which he wrote with Amos deShalit. Feshbach is also an assistant editor of the *Annals of Physics* published by Academic Press.

University and his PhD in physical chemistry from the California Institute of Technology (1933). In 1934 he joined the chemistry department at Harvard where he has remained throughout most of his professional career.

At the Massachusetts Institute of Technology **Vera Kistiakowsky** has been appointed professor of physics. She was formerly a senior research scientist in the physics department at MIT.

James H. McNally, of Los Alamos Scientific Laboratory, has been named technical representative for the US delegation at the spring session of the Geneva Conference of the committee on disarmament.

Howard D. Greyber, formerly senior scientist at Martin Marietta Corporation, Denver, Colorado, has been appointed director of meetings for the American Association for the Advancement of Science.

At the University of Maryland, College Park, **John D. Anderson Jr** has been appointed chairman and professor of the department of aerospace engineering. He was formerly chief of the hypersonics group at the Naval Ordnance Laboratory in Silver Spring, Maryland.

Vigdor Teplitz, of the Massachusetts Institute of Technology, has been appointed professor and head of the physics department at Virginia Polytechnic Institute and State University, effective 1 July.

The Joint Institute for Laboratory Astrophysics of the University of Colorado and the National Bureau of Standards has awarded visiting fellowships to ten scientists. They are **Ludwig C. Balling**, associate professor of physics at the University of New Hampshire, Durham; **Allen J. F. Metherell**, lecturer in physics at the Cavendish Laboratory, University of Cambridge, UK; **Christoph Ottinger**, Wissenschaftlicher assistant in atomic physics at the Max-Planck-Institut für Strömungsforschung in Göttingen, Germany; **Edwin A. Power**, professor of mathematics at University College London, UK; **William**

Canadian NRC presents Steacie Prize to Oka

Takeshi Oka, a physicist in the division of physics of the National Research Council of Canada, has been awarded the Steacie Prize for 1972. The prize, awarded annually to a younger scientist who has made an important contribution to the natural sciences, consists of the income from the E. W. R. Steacie Memorial Fund established in memory of the late president of NRC. Oka was given the award for his investigation of rotational-energy transfer during molecular collisions in gases.

A native of Japan, Oka completed his doctorate at the University of Tokyo in 1960. He worked with the department of chemistry there until 1963, when he became a postdoctoral

fellow at NRC. In 1965 he joined the spectroscopy section of NRC's division of physics.

AAAS Rumford Premium goes to Wilson

The American Academy of Arts and Sciences has awarded the Rumford Premium to E. Bright Wilson Jr for his studies of microwave spectra and the structure of molecules. Wilson, who is the Theodore Williams Richards Professor of Chemistry at Harvard University, was presented the award at the Academy's February meeting in Boston. The Rumford Premium consists of \$5000, a gold medal and a silver medal.

Wilson received his BS (1930) and AM (1931) degrees from Princeton
