## SOVIET PHYSICS—DOKLADY

A translation, beginning with 1956 issues of the physics sections of *Doklady Akademii Nauk SSSR*, the Proceedings of the USSR Academy of Sciences. All-science journal offering four-page reports of recent research.

**Monthly.** \$120 domestic. \$124 foreign. \$126 optional air freight Europe.  
\$135 optional air freight Asia.

## SOVIET PHYSICS—USPEKHI

A translation, beginning with September 1958 issue of *Uspekhi Fizicheskikh Nauk*. Offers review papers comparable to those in the *Reviews of Modern Physics*. Also contains reports on scientific meetings within the Soviet Union, book reviews, and personalia.

**Bimonthly.** \$110 domestic. \$113 foreign. \$114 optional air freight Europe.  
\$118 optional air freight Asia.

## SOVIET JOURNAL OF NUCLEAR PHYSICS

A translation, beginning with 1965 issues of *Yadernaya Fizika*. Contains reports of experimental and theoretical research on the physics of the nucleus, application of nuclear methods, cosmic rays, and elementary particle physics.

**Monthly.** \$215 domestic. \$219 foreign. \$222 optional air freight Europe.  
\$230 optional air freight Asia.

**Also Available on Microfilm**

first need is to get reasonable qualitative ideas as to what the results mean. Several short chapters deal with simple one-dimensional configuration coordinate models and thermodynamic considerations that are used in later parts of the book to interpret experiments. The authors use this material and standard energy-level and chemical-bonding considerations fairly successfully to explain the observations. There is a long way to go, however, before the whole story becomes well knitted together. Drickamer is too busy discovering new things to pause very long over any one of them.

This book is a unique collection of highly significant experimental data which should become incorporated into theoretical studies of the electronic structure of solids. It should be read thoughtfully by all those interested in improving our understanding of this important field.

DONALD S. MCCLURE

## new books

### Elementary Particles and Fields

**Progress in Particle Physics.** (Proc. of the 13th Int. Universitätswochen für Kernphysik, Steiermark, Austria, 4-15 February 1974). P. Urban, ed. 773 pp. Springer-Verlag, New York, 1974. \$60.70

### Nuclei, Nuclear Physics

**Advances in Nuclear Science and Technology, Vol. 8.** E. J. Henley, J. Lewins, eds. 349 pp. Academic, New York, 1975. \$35.00

**Nuclear Spectroscopy and Reactions, Part D.** J. Cerny, ed. 359 pp. Academic, New York, 1975. \$24.50

**Polarization Nuclear Physics.** (Meeting Proc., Ebermannstadt, West Germany, 1-5 October 1973). D. Fick, ed. 282 pp. Springer-Verlag, New York, 1974. \$9.90

**Symmetry Properties of Nuclei.** (Proc. of the 15th Solvay Conf., 28 September-3 October 1970). I. Prigogine, ed. 362 pp. Gordon and Breach, New York, 1974. \$40.75

### Chemical Physics

**Dielectric Phenomena and the Double Layer in Disperse Systems and Polyelectrolytes.** S. S. Dukhin, V. N. Shilov. 192 pp. Halsted, New York, 1974. \$21.75

**Electron Paramagnetic Resonance in Compounds of Transition Elements, 2nd ed.** S. A. Al'tshuler, B. M. Kozyrev. 589 pp. Halsted, New York, 1974. \$63.50

**Encyclopedia of Electrochemistry of the Elements, Vol. 3.** A. J. Bard, ed. 432 pp. Marcel Dekker, New York, 1975. \$60.00

**EPR of Magnetic Ions in Metals.** (Conf. Proc., Haute-Nendaz, Switz., 3-5 September 1973). G. Cohen, B. Giovannini, eds. 365 pp. Université de Genève, Genève, 1974.

## INTRODUCTION TO NOISE ANALYSIS

by R. W. HARRIS and T. J. LEDWIDGE  
A Volume in the PION APPLIED PHYSICS Series

An important step in the field of noise analysis has been the advent of on-line machines which are capable of analyzing in very short processing times such important statistical parameters as probability functions, spectral composition, and correlation functions. As these machines become generally available to practicing engineers and scientists the application of noise analysis techniques will increase rapidly. It was with this class of non-specialists in mind that this book was written.

CONTENTS: Random Signals and Their Statistical Description. Frequency and Time Description of Random Signals. Measurement of Random Signals. Linear System Identification. Use of Noise Analysis in Measurement. Analysis of Errors and Confidence Limits. Non-stationary and Nonlinear Systems. The Statistics of Functions of Random Variables.

1974, 102 pp., \$6.50/£2.50

## PROBLEMS IN PHYSICAL ELECTRONICS

edited by R. L. FERRARI and A. K. JONSCHER

A Volume in the PION PROBLEMS FOR ADVANCED STUDENTS Series

This collection of problems is intended for senior undergraduate and postgraduate students and lecturers in physics, electronics and electronic engineering, and also for self-study by practicing physicists and engineers.

CONTENTS: General Concepts of Physical Electronics. Electron Emission. Motion of Electrons in Vacuum. Vacuum Electronic Devices. Electrical Properties of Ionized gases. Conduction of Electrons in Solids. Electrical Properties of Dielectrics. Solid State Devices. Optoelectronic Devices. Masers and Lasers. Electronic Noise. Gyromagnetic Media.

1973, 471 pp., \$15.50/£6.00

## PROBLEMS IN THERMODYNAMICS AND STATISTICAL PHYSICS

edited by P. T. LANDSBERG

A Volume in the PION PROBLEMS FOR ADVANCED STUDENTS Series

This book is intended for teachers, undergraduates, and postgraduates in mathematics, physics, chemistry and engineering. It covers a full range of topics in thermodynamics, statistical physics, and statistical mechanics and is divided into 28 chapters. Each chapter has been designed by an expert in the field with the result that the book presents a penetrating view of statistical physics and its uses. There are new and original presentations in various areas, and in several sections recent research work has been incorporated in book form for the first time.

CONTENTS: The Basis of Statistical Physics. The Equilibrium State. The Steady Non-Equilibrium State. Irreversible Thermodynamics and Fluctuation Theory.

1971, 581 pp., \$16.75/£6.50

Published by Pion, Limited. Distributed by Academic Press.

Prices subject to change without notice.

# NEW

## Large Electrostatic Accelerators

edited by D. ALLAN BROMLEY  
1974. 298 pages. US \$58.50/Dfl. 140.00

In providing a complete discussion of the development, operation, modification and up-grading of all the world's large electrostatic accelerators, this book is without precedent. It represents the vast experience and design expertise of workers in the world's major nuclear science laboratories. Anyone concerned in any way with electrostatic accelerators will find this book an invaluable source of reference.

## The Theory of Brillouin Zones and Electronic States in Crystals

by H. JONES  
1975. 2nd rev. ed. about 297 pages.  
US \$37.50/Dfl. 90.00

Written for graduate students possessing the mathematical equipment provided by the average undergraduate course in mathematics or physics, this book treats the theory underlying the classification of electronic states in crystals and the methods by which the eigenvalues of these states may be calculated.

CONTENTS: Introduction. The one-dimensional periodic potential. Brillouin zones. The classification of electronic states. Point groups and their representations. Electronic states where the space groups contain glides and screw displacements. Extended  $k$ -space. Large zones. Quantitative estimates of wave functions and energies. Spin-orbit coupling effects. Author and Subject Index.

## Liquid Phase Epitaxy

edited by G. M. BLOM, S. L. BLANK and J. M. WOODALL  
1974. 342 pages. US \$66.75/Dfl. 160.00

The importance of liquid phase epitaxy, particularly in the growth of electronic and magnetic materials for new components of CW injection lasers, high-efficiency solid state lamps, microwave oscillators and nonvolatile magnetic bubble memories, is now widely recognised. This volume brings together not only papers covering liquid phase epitaxial growth but also papers concerned with such material-dependent characteristics as operating life, yield and cost analysis.

## BIC Current Integrators Since 1964

Model 1000-C\*

- Highest accuracy
- Widest current span
- Lowest input impedance
- Internal offset & test supply
- Solid state (LED) readout
- Automatic dead-time correction
- Inputs of either polarity
- Ground isolated from case
- Remote control capability
- Pulse integration without external filters

Complete specs on request
