

havior; computer scientists in unrelated fields claimed to have proved that the ABM couldn't work, and physicists claim to show that nuclear explosions can have no peaceful use. When scientists forget their duty to pursue truth wherever the search leads, when they start selecting facts to support comforting world-views or the policies of the good guys, they lose much of their value to society.

In 1961 MKS introduced the Type 77 high accuracy capacitance manometer system. It was accurate, reliable, covered the pressure range 10^3 - 10^{-4} Torr. for clean, dry gases only.

In 1976 MKS offers the Type 170 modular high accuracy system. More accurate. More reliable. Covers 11 decades: 10^{-4} - 10^{-7} Torr. Handles any gas compatible with Inconel and 304 stainless steel. And at a lower price than in 1961!

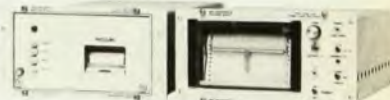

1970 - MKS perfected high accuracy "single sided sensors" able to handle dirty, corrosive media, with faster response time and easily cleaned cavity.

1971 - MKS introduced a variety of readout modules — analog and digital. Inputs and outputs computer compatible.

1972 - New analog/digital data acquisition modules, strip chart recorder, digital printer.

1973 - Multichannel sensor head selectors providing extended range coverage.

1975 - Automatic pressure control modules with superior system response optimization and high accuracy.

Computer-Aided Design of Surface Acoustic Wave Devices

edited by J. H. COLLINS and L. MASOTTI

Reprinted from the journal *Wave Electronics*, Vol. 2, Nos. 1/2/3

1976 viii+308 pages. US \$43.95/
Dfl. 110.00 ISBN 0-444-41476-2

Until now, very little attention has been paid in the literature to the computer-aided design (CAD) of surface acoustic wave (SAW) devices. The major aims of the European Workshop at the Villa Griffone in Bologna, Italy, were to address this significant topic in depth by focusing on the basic knowledge that is necessary for the appropriate CAD to realise SAW devices to specifications determined by systems engineers, and to discuss and clarify the correct priority of problems to be tackled in the future.

Characterization of Epitaxial Semiconductor Films

edited by H. KRESSEL

Reprinted from the journal *Thin Solid Films*, Vol. 31, Nos. 1/2
METHODS AND PHENOMENA,
Vol. 2

1976 xii+216 pages. US \$30.95/
Dfl. 77.00 ISBN 0-444-41438-X

This book contains a collection of invited papers providing up-to-date reviews of key methods of characterizing semiconductor epitaxial layers, structurally, chemically and electrically. The semiconductors discussed include silicon, SiC, PbSe and various III-V compounds, but in most cases the techniques can be utilised for other materials.

Advances in Epitaxy and Endotaxy

Selected Chemical Problems

edited by H. G. SCHNEIDER,
V. RUTH and T. KORMANY

1976 344 pages. US \$39.95/
Dfl. 100.00 ISBN 0-444-99845-4

The main purpose of this monograph is to present the current state of research in the field of epitaxy and endotaxy. The growing interest shown in epitaxial and endotaxial processes and the need to describe the theoretical background and experimental results concerning the formation and properties of these films make the publication of this book timely.
