

Wolf, Maréchal and Siegmund chosen for optics awards

Emil Wolf (University of Rochester), André Maréchal (Institut d'Optique Théorique & Appliquée, Paris) and Walter P. Siegmund (American Optical Corp) have been chosen to receive the three highest awards of the Optical Society of America in 1977.

Wolf will receive the Frederic Ives Medal, which consists of a silver medal and citation and is given for overall distinction in optics. Born in Prague, Wolf lived in England, 1940-59, and received his PhD from Bristol University in 1948. He emigrated to the US in 1959, becoming professor of physics at the University of Rochester in 1961. Wolf has held visiting professorships at the University of California, Berkeley and New York University. His research has been primarily in the field of electromagnetic theory and physical optics, especially diffraction and the theory of partial coherence. This year Wolf is serving as president-elect of the Optical Society.

Maréchal, who is a professor at the University of Paris and is director of the Institut d'Optique, will receive the C.E.K. Mees Medal for 1977. The Mees Medal is awarded biennially to a scientist who "exemplifies the thought that optics transcends all boundaries." The recipi-

ent must also live and work outside of North America. Maréchal is known for his theory of diffraction, as it applies to optical-imaging systems. He has published a text on geometrical optics and has written a book with Maurice Françon on *Diffraction and the Structure of Images*. A past-president of the International Commission on Optics, Maréchal became director of the Institut d'Optique in 1966. He has also served on numerous advisory committees to the French Government on its policies towards science and technology.

Siegmund is currently technical manager of the fiber-optics department of

American Optical Corp, Southbridge, Mass. He has been named recipient of the David Richardson Medal, which recognizes contributions to allied optics. He earned his doctorate at the University of Rochester in 1952 and joined the staff of American Optical the following year. He has held his current position since 1965 and his research interests include the development of new fiber-optics applications, the improvement of the performance of fibers and new manufacturing methods.

These awards will be presented at the Fall meeting of the Optical Society of America in Toronto, 9-14 October.

New York Academy honors physicists

The New York Academy of Sciences has presented eleven scientific awards for 1976. Among the recipients were Benjamin Widom, Gerald E. Brown and Alvin M. Weinberg.

The Boris Pregel Award for Research in Chemical Physics, including a citation, medal and honorarium, was presented to Widom, who is a professor of chemistry at Cornell University.

Brown is a professor of physics at the State University of New York, Stony Brook. He was the recipient of the Boris Pregel Award for Research in Nuclear Physics and Nuclear Engineering—an honorarium, certificate and medal were included.

The New York Academy of Sciences Award, consisting of \$1000 and citation, was given to Weinberg, director of the

Institute for Energy Analysis, Oak Ridge Associated Universities.

The awards were presented at the Academy's 159th Annual Meeting in December 1976.

Engineering award given to Deissler of NASA

Robert G. Deissler, technical consultant in fluid physics for the physical science division of NASA's Lewis Research Center (Cleveland, Ohio), has been presented the 1976 Max Jacob Memorial Award. The award is given annually for work in the area of heat transfer and is sponsored jointly by the ASME and AIChE.

Deissler studied engineering at Case Western Reserve University and joined NASA in 1947. He was appointed to his present position in 1972. He was cited for his contributions to the theory of turbulence and turbulent transfer.

Hodgkin receives ACA Frankuchen Award

The American Crystallographic Association has chosen Dorothy Hodgkin as the recipient of its Frankuchen Award in X-ray Crystallography. She will receive the award for "outstanding contributions to the teaching of crystallography and for fundamental and fruitful investigations in the many areas of crystal-structure analysis."

Hodgkin, who is a physical chemist at Oxford University, was born in Cairo and raised in the Sudan. She studied as an undergraduate at Somerville College, 1928-31, and then attended Cambridge University until 1934. That year she joined the faculty of Oxford University. She has received honorary doctorates from Leeds, Manchester and Cambridge Universities.

Perhaps best known for her work on

POWER MODULE

Model 2202

To regulate an AC-line connected load by means of a small DC signal from an automatic control instrument. It supplies large amounts of power for control of resistive heaters, thermo-electric elements, light sources, etc. in temperature controlled ovens, vacuum deposition equipment, infrared heat sources, temperature baths and other applications. The instrument features a pulse-width-modulated zero crossing - fires TRIAC circuit to minimize RF Interference, electronic protection against current overloads and voltage transient, and provides linear control to a AC power line up to 25 Amp. (110 V or 220 V).

LABORATORY Temperature Controller

Model 5301-E

With an input circuitry designed to accept resistance or voltage generating temperature sensors such as GaS-diodes, thermocouples, Ge & Pt Sensors, Carbon Resistors and Thermistors. The 5301-E, three mode controller offers temperature regulation to better than 0.01°K (or °C) in Vacuum chambers, Cryogenic dewars, Optical ovens, Tensile strength test apparatus, etc. for physics, metallurgy, chemistry and other scientific fields where the control and temperature range requirements are broad or change frequently. Set point readout is either directly in mV or Ohms (4-terminal measurement), with unlimited temperature range. Proportional, rate and reset modes are all internally adjustable, allowing to tune the controller to the thermal time constants of the process. 100 Watts, DC output or up to 5KW with Model 2202.

we hear that

biological structures of medical significance, Hodgkin received the 1964 Nobel Prize in Chemistry for the determination of the structures of vitamin B12, cholesterol iodide and penicillin using x-ray crystallographic methods. Among her various honors, she received the British Order of Merit (1965) and was appointed

HODGKIN

Wolfson Research Professor of the Royal Society.

In addition to her post at Oxford University, Hodgkin is also chancellor of Bristol University and a Fellow of Somerville College.

The Frankuchen Award, which is given every three years and consists of \$1500, will be presented to Hodgkin this month at the ACA's annual spring meeting in Asilomar, Calif.

The biennial Edward Goodrich Acheson Medal of the Electrochemical Society has been presented to **N. Bruce Hannay**, vice president of research and patents at Bell Laboratories. Hannay, who has been with Bell Laboratories since 1944, was cited for contributions to electronic-materials science and to the Society.

Herman Feshbach, head of the Massachusetts Institute of Technology's department of physics, has been named to the recently established Cecil and Ida Green Professorship in the department of physics.

Formerly professor of physics and astronomy at Yale University, **James M. Bardeen** has been appointed professor of physics at the University of Washington, Seattle.

The Timoshenko Medal of The American Society of Mechanical Engineers has been

presented to **Erastus H. Lee**, professor of applied mechanics and aeronautical engineering at Stanford University, for his contributions to solid mechanics.

Twenty-nine National Bureau of Standards employees at the Gaithersburg, Md. and Boulder, Colo. sites have received the highest honors and recognition of the US Department of Commerce. Eight were presented with Gold Medal Award for Distinguished Service and 21 received Silver Medal Awards for Meritorious Service. The following were among the Gold Medal recipients: **Pierre J. Ausloos** (physical chemist, Institute for Materials Research, Md.), **J. Paul Cali** (chief, Office of Standard Reference Materials Division, Md.), **Glenn F. Engen** and **Cletus A. Hoer** (physicists, Colo.). Included with the Silver Medalists were **Webster Capps** (physicist, Md.), **J. William Gadzuk**, **John M.R. Hutchinson** and **William R. Ott** (physicists, Colo.).

At The University of Chicago, **Robert B. Uretz** has been appointed acting dean of the Division of Biological Sciences and The Pritzker School of Medicine and acting vice president for the Medical Center. Uretz is deputy dean for academic affairs in the Biological Sciences Division and The Pritzker School. He is also the Ralph W. Gerard Professor in the department of biophysics and theoretical biology.

The 1976 Jesse W. Beams Award has been presented to **Robert V. Coleman**, Commonwealth Professor of Physics at the University of Virginia, Charlottesville. The award, which is given by the Southeastern Section of The American Physical Society, cited Coleman for his research on the properties of crystals, metals, superconducting systems and the spectra of biological systems.

Boston University's Center for Energy Studies has announced the appointment of **Law Kowarski** (CERN) as senior associate and **Michael McClintock** (former White House consultant) as research fellow. **Elliot Berman**, director of the Center, has become research professor of applied science at Boston University's College of Liberal Arts.

Beatrice F. Willard, a member of the Council of Environmental Quality of the Executive Office of the President, has been appointed professor of environmental science at the Colorado School of Mines, Golden.

The following appointments have been announced by Fermi National Accelerator Laboratory: **Arthur F. Greene** as assistant director for program planning, **Dennis Theriot Jr** as head of the research division neutrino department and **A. Lincoln Read** as head of research services.
