

SHORT DURATION PULSED UV ENERGY

from XENON

HIGH INTENSITY MICROPULSE SYSTEM

Pulse Duration	1—10 μ s
Energy Range	10—100 Joules
Pulser	Model-457
High Intensity Point Source Flashtube	N-722c
High Intensity Line Source Flashtube	N-725c
Universal Housing	FH-1298
Delay Trigger Pulser	Model-425

Other HIGH INTENSITY SHORT PULSE CAPABILITIES INCLUDE:

Model-437A and Related Nanolamps:	10 & 20 Nanoseconds
Pulse Duration	
Model 472 and Related Micropulse Flashtubes:	10—100 Microseconds
Pulse Duration	
Energy Range	100—2000 Joules

Applications Include: Dye Laser Pumping, Optical Ranging, Photo Chemistry, Semiconductor Studies, Fluorescence Studies and Specialized Photography.

again), what special considerations enter into its design, and especially what it is 'good for' and why." *The Versatile Satellite* is an attempt to provide such an understanding. Individual chapters are devoted to the uses of satellites in communications, meteorology, navigation, astronomy, surveying the oceans and the land and the monitoring of animal and plant life. Two final chapters deal with the role of humans in space and possible future uses of satellites.

Crystallography and Crystal Chemistry of Materials with Layered Structures (Physics and Chemistry of Materials with Layered Structures, Vol. 2). F. Lévy, ed. 369 pp. D. Reidel, Boston, 1976. \$39.00

Model 3700 Digital Temperature Indicator / Controller

A SINGLE SENSOR for both display and control functions

- Continuous digital display of temperature in degrees Kelvin
- Direct correlation between set point and temperature display
- No manual switching necessary between temperature display and control functions
- Heater power range selector switch and associated percent of power output meter

DON'T LET SUMMERTIME BE DOWNTIME

Built to cool:

GC/MS's, Lasers
X-Ray Diffraction
Diffusion Pumps
NMR's, SEM's

If you have been relying on tap water cooling, you know how unreliable that system can be — especially in hot weather.

Neslab's line of Coolflow and HX constant temperature cool water recirculators offer working temperature ranges from +5°C to +35°C with ± 1.0°C control.

Order before the hot weather arrives — for a reliable, money - saving, efficient alternative to tap water.

... On Making Brittle Bonding Metals Ductile.

The nickel-based alloys used for brazing stainless steel are normally extremely brittle. This brittleness makes it impractical to manufacture these alloys as thin foils, although foils are the most convenient form for brazing. As a result the nickel-based alloys have been available only as powders.

At the Materials Research Center, Dr. N. DeCristofaro has succeeded in producing nickel-based brazing alloys in the form of flexible foils by rapidly quenching them to the glassy state. In the foil form the alloys can be bent to conform to complex joint geometries, or punched to precise shapes. This avoids the difficulties associated with delivering powdered metals to joints that are to be brazed.

The new glassy brazing foils are currently being tested for use in the aerospace, automotive and chemical processing industries. Their unique properties and simple structures are helping to transform the art of brazing into a science.

Fast, on-the-spot FFT analysis of spectra from 0.25 Hz to 20kHz,

The first truly portable, complete FFT Spectrum Analyzer—our new SD340—is a "smart" instrument that does a lot of your work for you. It's microprocessor-based, but you don't have to be a computer expert to use it effectively in designing, testing and trouble-shooting. You can read out broadband and narrowband (analyzed) levels in engineering units—volts, dBV, dBm, Hz. The flick of one toggle expands any spectrum area five times to full CRT width for detailed study. Use it to study filter shapes...isolate harmonic terms...measure distortion levels...check channel-to-channel crosstalk and noise pickup.

The SD340 is equally at home with the R&D engineer and with the technician in production checkout or trouble-

shooting. Its simplicity, its versatility—plus being the lowest priced FFT Spectrum Analyzer on the market—makes the spectrum analyzer as practical and indispensable a measuring tool as the universally used oscilloscope.

Check these hard facts...

- ✓ 400-line resolution
- ✓ 0.25 Hz to 20 kHz analysis
- ✓ 0-100 Hz to 0-20 kHz analysis ranges
- ✓ 60 dB dynamic range
- ✓ FFT operation; all-digital stability
- ✓ Micro-processor based
- ✓ Built-in averaging
- ✓ Completely portable: only 30 lbs. with carrying case

Send for complete information and specifications.
