ULTRA HIGH VACUUM

OEM SPECIALISTS

Call us today for leaktested components made to YOUR specs!

10⁻¹⁰ TORR requirements surrounding UHV Monochromators and far UV to XRAY Spectrometers have taught us to be imaginative and reliable in the manufacture of vacuum systems and components. We would be happy to help you serve your markets better. Let us quote on some of your requirements.

KLINGER

The Affordable Positioning Solution

Liberate Tight Budgets With New Savings On Klinger's Precision Stages. . . Standards of Excellence

\$200
Model MR 80 25

Translation. . . Rotation. . . Vertical Motion. . . these linear, ball-bearing equipped positioners offer second-to-none accuracy and durability at competitive prices. Micrometer control assures accurate positioning. Spring-loaded carriages and pre-loaded ball bearings guarantee zero backlash and play. Ball races are made of hardened (63Rc) tool steel. Pre-drilled stainless steel mounting frames facilitate easy mating. There are 25 Type MR Translation Stages which have 5 to 75 kg load carrying capacities and 1mm to 80mm travel ranges, depending on model. Sensitivity is 1 μ m. Differential equipped models have 0.1 μ m sensitivity. Type TR Rotation Stages are offered in 14 models with load carrying capacities from 10 to 80 kg, depending on size. Each features Klinger's world famous durability and close tolerance quality design. Each is

rotatable over a 360° range and has a fine reading Vernier scale - 0.5 to 1 min. of arc, based on module size. Fine adjustment range is $\pm 2^\circ$. Type MV Vertical Motion Stages are offered in 3 models, with 40 to 190 kg load carrying capacities and 8mm to 20mm travel ranges, depending upon module. For these, a single unit micrometer reading corresponds to a vertical displacement of 5 μ m. Klinger also offers other manually driven positioning devices. OEM quantity prices are available.

Partons in Soft-Hadronic Processes. Proceedings of the Europhysics Study

Conventional arc lamp systems don't hold a candle to ours.

PRA arc lamp systems emit up to six times more usable light than conventional systems.

It's all in our elliptical mirror design (see diagram).

The elliptical mirror simply gathers more light. And focuses it. Our lamp housing has no lenses and, therefore, no reflective losses.

With six times more light output from our housings, our arc lamp systems deliver the lowest cost per watt of any system on the market.

And it's not only the housing. With our arc lamp system, there's "no weak link in the chain".

For example,

our systems are remarkably stable. Because the housings are water cooled, there's no beam jitter from fan vibration. And for even more stability, you can order an optional optical feedback system that keeps ripple and drift as low as 0.1% and 2% respectively.

Our systems offer the most sophisticated power supplies and ignitors available. And output modulation—your choice of sine wave, ramp or square wave. All useful for signal processing.

For more about our arc lamp systems, call or write for our free brochure. PRA, 100 Tulsa Road, Oak Ridge, Tennessee 37830, (615) 483-3433.
