these points, of the digital algorithms for interferometric image reduction in the photon-counting mode, and of the study work made on telescope arrays in space is found in *High Resolution Astronomy* (Geneva Observatory, Saclay, Switzerland, 1985)—the 15th advanced course of the Swiss Society of Astronomy and Astrophysics.

The standing problem with text books for students has always been to convey the beauty of what is done, the fascination and excitement felt by researchers involved in major breakthroughs. Reflecting the latest advances is also difficult, of course, owing to publishing delays, and this proves particularly difficult in a blooming field such as interferometry. Electronic publishing is clearly the way to go, for this reason and also for saving the last forests where those superb birds and butterflies, with their bright interference colors, still survive. Thus, the image of interferometry presented to student readers does not reflect the latest and most exciting developments.

In spite of its limited scope, Hariharan's book is a good study tool owing to its clear presentation of the basic principles underlying these beautiful new applications.

## The Aesthetic Dimension of Science

Edited by Deane W. Curtin

145 pp. Philosophical Library, New York, 1982.

ISBN 0-8022-2393-1. \$12.50

The 18th Nobel Conference, held in 1980 at Gustavus Adolphus College in Minnesota, brought together two physicists, a chemist, a musician, and a philosopher to discuss the question of aesthetics and its role in science. Their talks, together with transcripts of the discussions, comprise this brief volume.

Nobel laureates William Lipscomb and Chen Ning Yang give a series of choice quotations from researchers who have articulated the beauty of science, and they laud the compelling power of symmetries in theoretical physical science. Polymath Freeman Dyson compares the styles of Manchester and of Athens, the diversifiers versus the unifiers; his essay is wondrously idiosyncratic, stimulating, and of dubious relevance to the matter of aesthetics. New England Conservatory of Music President Gunther Schuller presents a capsule history of changing musical aesthetics—"kaleidoscopic" is his term—and although he says that

"beauty" was a bad word just a couple of decades ago, beauty is now being rehabilitated although undefined. Philosopher Charles Hartshorne, writing on "Science as the search for the hidden beauty of the world," has the deepest of the essays, filled with provocative discussions of materialism, determinism, dualism, metaphysics, and the idea of God.

Henri Poincaré wrote: "Science is useful because it is beautiful." His cryptic statement seems to provide about as much insight into the vexed question of aesthetics in science as any of these essays. At dramatic moments in the history of science one can see the entire enterprise propelled to a new level by a visionary with an aesthetic sense. Copernicus opted for a heliocentric system because it was "pleasing to the mind," something he saw in mind's eye but could not support with any observational proof. But at the same time he was treacherously misguided in his aesthetic that celestial motions must be composed of uniform, circular parts: he spent more effort eliminating Ptolemy's offending equant than in purging geocentric "fossils" from his cosmology.

Such questions do not enter this rather superficial set of musings into the aesthetic dimension of science, and as a whole the collection does not provide any really satisfactory framework for such an inquiry. Nevertheless, at least for me, Hartshorne's and Dyson's essays made reading the book worthwhile.

## Solid State Reliability with Incredible Versatility.

### 500 Watts/A-500

- 300 kHz to 35 MHz
- Up to 1000 watts pulse and CW
- No bandswitching
- Works into any load impedance

### 100 Watts/2100L

- 10 kHz to 12 MHz coverage
- 100 watts linear Class A power
- Up to 250 watts saturated

### 200 Watts/3200L

- 250 kHz to 150 MHz
- 200 watts linear power to 120 MHz
- 175 watts to 150 MHz
- Operates from 115/230V receptacle

### 3 Watts/603L

- 0.8 to 1000 MHz
- 3 watts of linear power
- Flat 37 dB gain
- Up to 5 watts saturated

### 400 Watts/1040L

- 10 kHz to 500 kHz
- Up to 700 watts output
- Useful power up to 1 MHz
- Built-in true average power meter

### 25 Watts/525LA

- Flat 1 to 500 MHz
- 25 watts linear output
- Up to 40 watts pulse and CW
- No bandswitching

### 100 Watts/5100L

- Flat 1.5 to 400 MHz
- 100 watts linear power
- 200 watts to 200 MHz
- No bandswitching

### 1000 Watts/A1000

- 300 kHz to 35 MHz
- 1000 watts linear Class A
- Ruggedly built
- Operates from 230 VAC, 3 phase

### 40 Watts/440LA

- 150 kHz to 300 MHz
- 40 watts Class A linear
- State-of-the-Art
- Up to 75 watts CW and pulse

## THE KLINGER ARGUMENT AGAINST COMPROMISE:

## WE ALONE GIVE YOU SO WIDE A SELECTION OF LINEAR STAGES WITH SUCH HIGH ACCURACY.

Only Klinger has manually operated or motor-driven linear positioners that offer 0.1 micron resolution over the widest travel range which can create XY or XYZ systems.

Only Klinger lets you select from over 200 different stainless steel linear stages that guarantee position to 1 micron or better. And they have precision-ground bearings to assure accurate trajectory. These devices include our MR/MRT stages for cost-effective, manually operated requirements and UT/MT stages for remote controlled applications. All offer essentially zero backlash operation.

Options include encoders, homing, vacuum and clean room preparation.

So don't compromise. Klinger's belief that the best is always a bargain has made us the world leader in micropositioning systems. For specs get our free 212-page handbook. Write or call Klinger Scientific Corporation, 110-20 Jamaica Avenue, Richmond Hill, NY 11418. (718) 846-3700.

# Our new 880 Series with RS 232 is the world's first clean vacuum gauge.

Thanks to fiber-optics option, there's no electrical interference with Varian's new 880 Series with RS 232 compatibility. This means you'll get a "cleaner" connection for your computer systems or electronics link.

Of course, the workhorse 880 Series of microprocessor-based ionization gauge controls has always been the first choice of the industry. And when you add the benefit of a cleaner vacuum to reliability, economy and ease of use, it's an even smarter choice.

What's more, you'll also find features such as automatic range-changing, bar graph readout of thermocouple gauges, and more. The features that have always made Varian vacuum gauges the number one choice.

In other words, the world's only clean vacuum gauge is another first for Varian.

## THE ONE STOP SHOP FOR PMT ACCESSORIES

### PACIFIC INSTRUMENTS HAS THE ACCESSORIES

to make your photomultiplier into a sophisticated laboratory system with prices to delight you. By selling direct to the user, Pacific Instruments is able to put the most sophisticated equipment — the results of 15 years' experience — at your fingertips for a fraction of what you'd expect to pay. Every product is supported with a one year warranty and available for quick delivery.

- High Voltage Power Supplies and PC Cards
- Ambient and Cooled PMT Housings
- Photon Counting Systems
- Photometers and Picoammeters
- Video and Pulse Amplifiers
- Ultra Fast Discriminators

# MICROVAX IMAGING IMAX

A MicroVAX compatible graphics/imaging workstation, includes QD512 color display board and Research System Inc.'s powerful IDL interactive imaging language. IMAX converts your MicroVAX into a full-featured graphics/imaging workstation without sacrificing any of its multi-user capabilities. Applications: medical, astronomical, satellite, textile, military imaging, image archiving or sophisticated graphics — look at the IMAX system! For information:

## PEARSON Wide Band, Precision Current Monitor

With a Pearson current monitor and an oscilloscope you can make precise amplitude and waveshape measurement of ac and pulse currents from milliamperes to kiloamperes. Currents can be measured in any conductor or beam of charged particles, including those at very high voltage levels.

A typical model gives an amplitude accuracy of +1%, -0%, 20 nanosecond rise time, droop of 0.5% per millisecond, and a 3 db bandwidth of 1 Hz to 35 MHz.

Contact us and we will send you engineering data.
