

celeration; propagation of highly space-charge-dominated ion beams; ion-source cathodes; and the taxonomy of positive-ion sources, negative-ion sources and surface-ionization sources. The chapters are divided into logically ordered subtopics. Several self-contained derivations, ordered according to progressive physical complexity in terms of assumed initial conditions, are provided. Thus readers not only see the effect of each

initial condition on the final result, but also reinforce their mathematical skills through repetitive calculation. For example, Forrester introduces the subject of space-charge effects within an ion beam by solving Poisson's equation for space-charge flow between simple parallel-plate electrodes for the initial injection conditions of a zero velocity, a constant velocity and a Maxwellian velocity distribution.

The first five chapters chronicle the fundamentals of space-charge flow, collisionless plasma formation, the effects of collisions within a plasma, and ion-beam extraction and transport as set forth by such pioneers in ion-source and ion-beam physics as Irving Langmuir, Clement Child, David Bohm and Meghnad Saha, as well as more contemporary contributors. The remaining chapters cover more technological aspects of positive- and negative-ion sources, including a complete chapter on cathodes of plasma-discharge sources. Individual chapters are devoted to cesium surface ionization sources and to descriptions of a limited number of low-mass, plasma-discharge positive- and negative-ion sources. Problem sets at the end of each chapter are designed to illustrate particular physical concepts, as well as to challenge the student's understanding; the appendix contains a complete set of solutions to these problems.

Forrester was an innovative practitioner of ion-source physics. This book will serve as lasting testimony to his numerous and prodigious contributions. Certainly anyone interested in studying the physics of high-intensity ion sources and space-charge-dominated ion beams will find this a valuable book.

G. D. ALTON

Oak Ridge National Laboratory

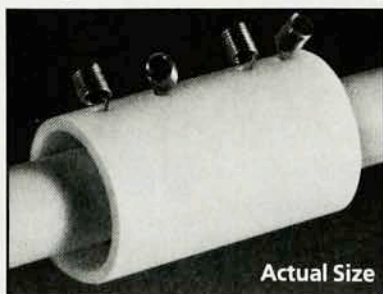

THE FIRST IN-VACUUM, LINEAR MOTOR POSITIONING SYSTEM.

Featuring Remote Control With No Mechanical Feedthroughs.

Precision positioning inside high vacuum chambers used to require bulky, expensive equipment. No more. For over fifteen years, Burleigh has offered a diverse line of sophisticated piezoelectric (PZT) actuators and motor systems, including our famous all-piezoelectric Inchworm® motor. Now Burleigh has completely redesigned the compact Inchworm motor and companion translation stage for in-vacuum operation.

- UHV compatible materials.
- In-vacuum operation with remote controller.
- No mechanical feedthroughs or bellows.
- A small footprint makes it ideal for close quarters.
- True linear motion.
- Bakeout temperatures to 150°C.
- Micron resolution

The Burleigh UHV Series represents an important advance. To receive a product brochure or discuss your application, call Burleigh and ask for the UHV Applications Group.

No Noise Is Good Noise

The SR560 Low-Noise Preamplifier

is the ideal voltage amplifier for the most demanding applications. With a low 2 nV/ $\sqrt{\text{Hz}}$ of input noise, even the smallest signals won't get lost. Two adjustable signal filters, each configurable as high or low pass, attenuate unwanted interference. Internal batteries provide operation isolated from the AC line.

And the best news of all, the SR560 is priced at only \$1695, including remote interface. Whether you need lower noise, higher gain, or greater bandwidth, call Stanford Research Systems and take a closer look at the SR560.

\$1695

2 nV/ $\sqrt{\text{Hz}}$ input noise
1 MHz bandwidth
Gain variable to 50,000
AC or DC coupled
True differential or single-ended input
2 configurable signal filters
Selectable gain allocation
120 dB CMRR
Line/Internal battery operation
Remote interface

for Physics Computing...

COMPUTERS IN PHYSICS

*Named Best New Journal in Science/Technology/Medicine
by the Association of American Publishers*

Computers In Physics is your most timely source for the latest physics computing ideas and applications. With an editorial team headed by Robert R. Borchers, Associate Director for Computation at Lawrence Livermore National Laboratories, this lively and colorful bimonthly blends the impact of a magazine with the authority of a journal.

Brimming with valuable information

Computers In Physics keeps you up-to-date with diverse computer applications for scientists and engineers. Each issue is packed with feature and news articles covering the latest developments, along with insightful, in-depth papers subjected to rigorous peer review.

"How-to" columns to meet your computational demands

Learn tips and techniques with three regular columns: *Numerical Recipes* by William H. Press and Saul A. Teukolsky, *Spreadsheets* by Robert Dory, and *Computer Simulations* by Harvey Gould and Jan Tobochnik.

New products, software, reviews, and more...

Computers In Physics is a buyer's guide for laboratory and educational computer users, showing you what's new and important in hardware, software and instrumentation. Regular departments bring you reviews of the latest software, books, and publications. You'll get information on databases, new technologies for research, and educational applications of computers.

Peer-reviewed papers at the leading edge...

In each issue you'll find peer-reviewed papers on the frontiers of computer-based research and applications in experimental, theoretical, and computational physics. These research papers provide authoritative coverage in astronomy, geophysics, physics education, materials science, optics, acoustics and many more disciplines.

"*Computers In Physics* is one of the major scientific journals which allows scientists to use full color computer visualization to convey the results of their work.... The magazine provides a much needed forum for following developments in this rapidly changing field."

Image produced using Sun version of IDL

IDLTM INTERACTIVE SOFTWARE FOR SCIENTIFIC RESEARCH

IDL takes you there. It is the ideal tool for your advanced research—a completely interactive analysis and visualization package for the physical sciences. IDL combines data analysis, reduction, scientific graphics, and image processing in a fast, powerful, easy-to-use system. Solve problems rapidly with IDL's efficient, array-oriented language and comprehensive library of procedures—optimized for handling large data sets on today's computers and workstations. IDL is used by innovative researchers at the most prestigious institutions around the world. IDL is compatible with VAX[®]/VMS[®] and is now available in a new enhanced version for Sun[®] Workstations.

Take IDL on your next exploration.

MORE POWER TO YOU FOR LESS.

Maxwell Laboratories is the leader in delivering consistent, reliable high-energy capacitors. In fact, Maxwell has delivered well over 100 megajoules of 50 kJ capacitors... more than all the competition combined.

And Maxwell's Series C High Energy Capacitor Application Guide gives you all of the information you need on a wide variety of models to specify the Series C capacitor that best satisfies your needs, or to contact Maxwell with your custom design parameters.

Maxwell's 67,000 square foot capacitor manufacturing facility is another reason why we'll stay in front. State-of-the-art efficiency means better service and lower prices for Maxwell customers. Now you can have more of the best... for less.

**For your copy of the Series C High Energy Capacitor Application Guide, call the Maxwell Sales Department today.

Geometrical and Instrumental Optics. *Methods of Experimental Physics 25.* D.

5.4 Gigabytes Unattended Backup

Digi-Data's GIGASTORE™ provides up to 5.4 Gigabytes of data storage on a single T-120 Super VHS video cartridge. That permits backup of your largest disk drive on off-hours without an operator.

Utilizing true read-after-write coupled with very powerful error correction, GIGASTORE gives you an unsurpassed error rate of 1 in 10^{19} bits. In addition, you get a high speed search capability not available in most 9-track drives.

GIGASTORE can be provided with an interface for IBM PC/XT/AT/PS-2™. It is available with DEC interface for VAX and MicroVAX. It is also available for backup of data on Novell LANs.

Call Digi-Data, an organization with a 25 year history of manufacturing quality tape drives, at (301) 498-0200.

™ GIGASTORE is a trademark of Digi-Data Corporation. PC/XT/AT/PS-2 are trademarks of IBM Corporation.
