

FUSED QUARTZ

for tuning forks or "hot" isotopes

Quartz is one of science's most important tools. Its many unique properties range from absolute and unchanging musical pitch, to chemical inertness to nuclear materials.

Hanovia is one of the world's major producers of clear quartz products. Hanovia's optical grades of fused quartz are universally known. But many, many other quartz laboratory tools are also available: graded joints, spherical and standard taper joints, tubing, rods, plates or special shapes to specification.

Detailed information and prices are available on all the above, upon request.
