

good addition to the library of anyone who is interested in general relativity, black holes, and cosmology. Many who learned or studied general relativity from other sources would gain from the depth and beauty of the geometrical approach so beautifully described here. Reading Ludvigsen's book will be a particular pleasure for those who prefer deep thinking to performing tedious calculations.

High Voltage Power Supplies

The PS300 programmable power supply series provides up to 5kV at 25 Watts for laboratory and ATE applications. These supplies offer a wide range of features including programmable current and voltage limits, selectable overload response, and short circuit protection.

Dual LED displays monitor both output current and voltage, while a third display allows error-free front panel entry. A GPIB interface is available for ATE systems.

The combination of features, price and performance make the PS300 series the perfect choice for laboratory or systems use.

- PS350 0 to 5kV
- PS325 0 to 2.5kV
- PS310 0 to 1.25kV

- 25 Watts output power
- 0.001% regulation
- 0.1% accuracy
- Low output ripple
- Dual polarity
- Voltage and current readouts
- GPIB interface (optional)
