# Lots of Smarts. So Little Space.

Now you can put more monitoring and control into your plasma process with Qinto, the most flexible RF power supply on the market. A wide variety of monitoring and control functions are built in, including ramping of power output, energy control, target energy monitoring, error logging and output monitoring.

Want to control the Qinto over RS232, RS484, DeviceNet or CANopen? No problem. You

can even connect a serial modem up to the supply and communicate with it, using any terminal program to perform remote control and diagnostics. And, our remote configuration feature lets you easily change the Qinto's functions for compatibility with other equipment.

Checking out the compact Qinto, OEM or rack mounted, could be one of the smartest things you can do. Call, write, or e-mail for details.
