HENDRIX INTERFEROMETER by DAVIDSON

*To New Worlds
through Science*

We are pleased to offer to the scientific instrument industry a complete line of general purpose interferometers in working apertures from 3 inches to 10 inches.

These interferometers measure the optical performance of reflectors, prisms, windows, wedges and assemblies. Measurements can be made to 1/10th of a fringe over the entire working area (1/10 fringe = 1 millionth of an inch).

The Hendrix interferometer requires no special mounting, dead-air room or specially trained personnel to function perfectly.

Comes equipped with an eyepiece for easy and quick alignment of optical paths, a hand operated fringe counter and a bracket for camera (by which fringes may be photographed).

For precision interferometer work, the Hendrix cannot be equalled. Consider one of our models for your critical measuring problems. Find how it performs. Data gladly sent.
