

and lateral defocusing, random errors in reflector surface accuracy, and intentional beam steering by lateral deviation of the receiving antenna—some for theoretical analysis and some for qualitative description.

Underlying those special topics is Baars's attempt to offer a coherent analysis of the basic reflector antenna. For three decades I have taught the subject and find myself somewhat uncomfortable with his mathematical treatment, which is rather discontinuous and sometimes obscure. For example, he often skips large intermediate steps in a derivation. For a basic, first-principles pedagogical treatment, one might be better off consulting the classic *Microwave Antenna Theory and Design* (McGraw-Hill, 1949), edited by Samuel Silver; Willard Van Tuyl Rusch and Philip Potter's *Analysis of Reflector Antennas* (Academic Press, 1970); Peter Wood's *Reflector Antenna Analysis and Design* (Peter Peregrinus, 1980); or Brian Westcott's *Shaped Reflector Antenna Design* (Research Studies Press, 1983).

Another matter of concern is a major flaw in the treatment of what is probably the most important relationship in the whole subject of aperture antennas, including paraboloids—the Fourier transform relation between the field in the aperture and the radiated field in the Fraunhofer region. In chapter 3, figure 3.9 and its caption are incompatible, and the accompanying text only adds to the confusion. Given this indication of perfunctory editing and proofreading, one hopes that no other, less obvious anomalies exist.

Overall, Baars's text is a valuable addition to the literature on large reflector antennas. As an encyclopedia of modern, very large paraboloidal antennas, it has no equal, and the existing state of the art is well documented therein. Despite the book's flaws, I believe it will become a standard reference.

How Mathematics Happened

The First 50,000 Years

Peter S. Rudman
Prometheus Books, Amherst, NY,
2007. \$26.00 (314 pp.).
ISBN 978-1-59102-477-4

Given the title of Peter S. Rudman's *How Mathematics Happened: The First 50,000 Years*, one would expect an explanation of, well, how mathematics happened. But in the introduction, Rudman ex-

plains what he's really writing about: "There is an essential role for judicious guessing in mathematics, and sometimes that is the best we can do. . . . I, or anyone else who tries to interpret the archeological record in terms of not just *what* was done, but also in terms of *why* it was so done, must rely on conjecture" (page 27). Thus his book is intentionally full of conjectures—mostly plausible ones.

Some of Rudman's conjectures show his romantic side. One example is his explanation behind the purpose of the Old Babylonian tablet known as Plimpton 322, which is more than 3500 years old and on display at Columbia University. It is a table of a few lines of numbers that, with some interpretation by researchers, suggests the Babylonians knew what we now call Pythagorean triples, three positive integers a , b , and c , such that $a^2 + b^2 = c^2$. Rudman's contribution is to explain how Plimpton 322 was used in the construction of Babylonian ziggurats, buildings that had the shape of frustums of square pyramids. He justifies his argument, in part, with conjectured contacts between Babylonia and ancient India, areas where altar construction relied on the Pythagorean theorem. His ziggurat conjecture makes for interesting reading, but its historical likelihood is nil.

Rudman, a retired professor of physics at the Technion-Israel Institute of Technology, also has a skeptical side that is not restricted to mathematics. In his section on "pyramidiot," he lambastes "wacky Egyptology," in which many amateurs have made numerological claims about the pyramids. Despite his disdain for such claims, he is not above making some of his own. He also validly criticizes Thor Heyerdahl's diffusion theory that Egyptian pyramid-building technology influenced Mayan pyramids and Erich von Däniken's "fabricated nonsense" of extraterrestrial contact with ancient Egyptians. Again, this makes for interesting reading, but it's not clear what business it has in what's billed as a book on the history of mathematics.

The subtitle of the book also needs an explanation, and Rudman supplies one: "I shall somewhat arbitrarily choose the era with unambiguous physical evidence of contemplative thinking, roughly 50,000 BCE, to define the beginning of real counting and the birth date of arithmetic" (page 53). But he qualifies his statement by saying the birth date might have been as early as a million years ago or as late as 30 000

BCE. In any case, the scope of history under his consideration begins with counting and how it started independently in several regions around the world, and moves to the mathematics of ancient Egypt and Babylonia, primarily in the second and third millennia BCE. He also provides a few pages about early Greek mathematics in the first millennium BCE; more recent mathematics is not mentioned except for comparative purposes.

The book is clearly not a research text on the subject but a popularization. Throughout the text Rudman offers "fun questions" that in other books might be called exercises. It's hard to see how a problem like "Convert 456 and 567 into hieroglyphic symbols and add them" is considered fun. Yet some of the questions are a bit fun, like the one that begins with "Zorbi, an alien from the planet Geek of the star Gamma Centuri in the Andromeda galaxy, landed in my backyard, of all places," and ends with "Use the greedy algorithm" (page 47). Plenty of room exists to criticize the book: For instance, Rudman writes, "Women's intuition is more hindsight than foresight, as expressed by a husband's whimsical wish, 'If I only knew yesterday what my wife knows today'" (pages 25 and 26). What *can* one say to that?

Rudman is an accomplished physicist who has used *How Mathematics Happened* to share his views, both romantic and skeptical, on why the ancients did mathematics in the particular and the peculiar ways they did. From my knowledge, no otherwise similar book on the history of mathematics covers the same period; several others do include most of the material Rudman treats, though they tend to cover more recent times. The value of Rudman's book comes from his personality, which shines through every page, and from his enjoyable exposition of the subject.

Electrotherapeutic Devices: Principles,

Programmable DC Power Supplies to 20kV

SRS has added four new high voltage power supplies to the PS300 series — -10kV, +10kV, -20kV and +20kV. All PS300 series supplies offer a wide range of features including programmable current and voltage limits, selectable overload response, short circuit protection, and a GPIB computer interface.

- 0.001% regulation
- 0.05% accuracy
- 1 volt resolution
- 0.0015% ripple
- Limits & trips
- GPIB interface

25 Watt Power Supplies ... \$1350 (U.S. list)

- PS310 ± 1.25 kV
- PS325 ± 2.5 kV
- PS350 ± 5 kV

10 Watt Power Supplies ... \$2250 (U.S. list)

- PS355 -10kV
- PS365 +10kV
- PS370 -20kV
- PS375 +20kV

Welcome to Your Brain: Why You Lose Your Car Keys But Never Forget How to Drive and Other Puzzles of Everyday Life. S. Aamodt, S. Wang. Bloomsbury, New York, 2008. \$24.95 (220 pp.). ISBN 978-1-59691-283-0

society and government

Access Denied: The Practice and Policy of Global Internet Filtering. R. Deibert, J. Palfrey, R. Rohozinski, J. Zittrain, eds. *The Information Revolution and Global Politics*. MIT Press, Cambridge, MA, 2008. \$45.00, \$20.00 *paper* (449 pp.). ISBN 978-0-262-04245-1, ISBN 978-0-262-54196-1 *paper*

Arsenals of Folly: The Making of the Nuclear Arms Race. R. Rhodes. Alfred A. Knopf, New York, 2007. \$28.95 (386 pp.).

ISBN 978-0-375-41413-8

Bomb Scare: The History and Future of Nuclear Weapons. J. Cirincione. Columbia U. Press, New York, 2007. \$27.95, \$18.95 *paper* (206 pp.). ISBN 978-0-231-13510-8, ISBN 978-0-231-13511-5 *paper*

Disrupting Science: Social Movements, American Scientists, and the Politics of the Military, 1945–1975. K. Moore. *Princeton Studies in Cultural Sociology*. Princeton U. Press, Princeton, NJ, 2008. \$35.00 (311 pp.). ISBN 978-0-691-11352-4

Iran and the Bomb: The Abdication of International Responsibility. T. Delpech (translated from French by R. Schwartz). *CERI Series in Comparative Politics and International Studies*. Columbia U. Press, New York, 2007 [2006]. \$26.95 (148 pp.). ISBN 978-0-231-70006-1

Mathematics and Democracy: Designing Better Voting and Fair-Division Procedures. S. J. Brams. Princeton U. Press, Princeton, NJ, 2008. \$65.00, \$27.95 *paper* (373 pp.). ISBN 978-0-691-13320-1, ISBN 978-0-691-13321-8 *paper*

Natural Security: A Darwinian Approach to a Dangerous World. R. D. Sagarin, T. Taylor, eds. U. California Press, Berkeley, 2008. \$49.95 (289 pp.). ISBN 978-0-520-25347-6

Open Source: Technology and Policy. F. P. Deek, J. A. M. McHugh. Cambridge U. Press, New York, 2008. \$99.00, \$27.99 *paper* (369 pp.). ISBN 978-0-521-88103-6, ISBN 978-0-521-70741-1 *paper*

space and planetary science

The Composition of Matter. R. von Steiger, G. Gloeckler, G. M. Mason, eds. *Space Science Series of ISSI* 27. Springer, New York, 2007. \$169.00 (526 pp.). ISBN 978-0-387-74183-3

Extrasolar Planets: Formation, Detection and Dynamics. R. Dvorak, ed. Wiley-VCH, Weinheim, Germany, 2008. \$135.00 *paper* (287 pp.). ISBN 978-3-527-40671-5

New Solar Physics with Solar-B Mission. K. Shibata, S. Nagata, T. Sakurai, eds. *Astronomical Society of the Pacific Conference Series* 369. Proc. mtg., Kyoto, Japan, Nov. 2005. Astronomical Society of the Pacific, San Francisco, 2007. \$77.00 (596 pp.). ISBN 978-1-58381-237-2

statistical physics and thermodynamics

Bayesian Inference and Maximum Entropy Methods in Science and Engineering. K. H. Knuth et al., eds. *AIP Conference Proceedings* 954. Proc. wksp., Saratoga Springs, NY, July 2007. AIP, Melville, NY, 2007. \$227.00 (492 pp.). ISBN 978-0-7354-0468-7

Entropy Methods for the Boltzmann Equation. F. Rezakhanlou, C. Villani. *Lecture Notes in Mathematics* 1916. Springer,

New York, 2008. \$44.95 *paper* (107 pp.). ISBN 978-3-540-73704-9

Equilibrium Between Phases of Matter: Phenomenology and Thermodynamics. H. A. J. Oonk, M. T. Calvet. Springer, Dordrecht, the Netherlands, 2008. \$109.00 (404 pp.). ISBN 978-1-4020-6123-3

Extremes in Nature: An Approach Using Copulas. G. Salvadori, C. De Michele, N. T. Kottegoda, R. Rosso. *Water Science and Technology Library* 56. Springer, Dordrecht, the Netherlands, 2007. \$129.00 (292 pp.). ISBN 978-1-4020-4414-4

Introduction to Bayesian Statistics. 2nd rev. ed. K.-R. Koch (translated from German by K.-R. Koch). Springer, New York, 2007 [2000]. \$119.00 (249 pp.). ISBN 978-3-540-72723-1

Thermodynamics of the Glassy State. L. Leuzzi, T. M. Nieuwenhuizen. *Series in Condensed Matter Physics*. Taylor & Francis, New York, 2008. \$129.95 (344 pp.). ISBN 978-0-7503-0997-4

texts and education

2007 Physics Education Research Conference. L. Hsu, C. Henderson, L. McCullough, eds. *AIP Conference Proceedings* 951. Proc. conf., Greensboro, NC, Aug. 2007. AIP, Melville, NY, 2007. \$89.00 *paper* (218 pp.). ISBN 978-0-7354-0465-6

Introduction to Planetary Science: The

Geological Perspective. G. Faure, T. M. Mensing. Springer, Dordrecht, the Netherlands, 2007. \$99.00 (526 pp.). ISBN 978-1-4020-5233-0

Molecular Biology of the Cell. 5th ed. B. Alberts et al. Garland Science/Taylor & Francis, New York, 2008 [2002]. \$142.00 (1268 pp.). ISBN 978-0-8153-4105-5, CD-ROM

Molecular Biology of the Cell: The Problems Book. 5th ed. J. Wilson, T. Hunt. Garland Science/Taylor & Francis, New York, 2008 [2002]. \$39.95 *paper* (587 pp.). ISBN 978-0-8153-4110-9, CD-ROM

Quantum Mechanics. 4th ed. F. Schwabl. Springer, New York, 2007 [2002]. \$69.95 (424 pp.). ISBN 978-3-540-71932-8

Quantum Mechanics: Foundations and Applications. D. G. Swanson. Taylor & Francis, New York, 2007. \$69.95 (343 pp.). ISBN 978-1-58488-752-2

Rejuvenating the Sun and Avoiding Other Global Catastrophes. M. Beech. *Astronomers' Universe*. Springer, New York, 2008. \$29.95 *paper* (225 pp.). ISBN 978-0-387-68128-3

theory and mathematical methods

XXVI Workshop on Geometrical Methods in Physics. P. Kielanowski, A. Odziejewicz, M. Schlichenmaier, T. Voronov,

eds. *AIP Conference Proceedings* 956. Proc. wksp., Białowieża, Poland, July 2007. AIP, Melville, NY, 2007. \$108.00 (252 pp.). ISBN 978-0-7354-0470-0

Approaches to Fundamental Physics: An Assessment of Current Theoretical Ideas. I.-O. Stamatescu, E. Seiler, eds. *Lecture Notes in Physics* 721. Springer, New York, 2007. \$79.95 (422 pp.). ISBN 978-3-540-71115-5

Dynamics of Third-Order Rational Difference Equations with Open Problems and Conjectures. E. Camouzis, G. Ladas. *Advances in Discrete Mathematics and Applications* 5. Chapman & Hall/CRC/Taylor & Francis, Boca Raton, FL, 2008. \$109.95 (554 pp.). ISBN 978-1-58488-765-2

Integral Transforms and Their Applications. 2nd ed. L. Debnath, D. Bhatta. Chapman & Hall/CRC/Taylor & Francis, Boca Raton, FL, 2007 [1995]. \$79.95 (700 pp.). ISBN 978-1-58488-575-7

An Introduction to Sequential Dynamical Systems. H. S. Mortveit, C. M. Reidys. *Universitext*. Springer, New York, 2008. \$59.95 *paper* (248 pp.). ISBN 978-0-387-30654-4

Noncommutative Geometry and Cayley-Smooth Orders. L. Le Bruyn. *Pure and Applied Mathematics* 290. Chapman & Hall/CRC/Taylor & Francis, Boca Raton, FL, 2008. \$99.95 (524 pp.). ISBN 978-1-4200-6422-3 ■

NEW FROM OXFORD

COSMOLOGY

STEVEN WEINBERG, *Department of Physics, University of Texas at Austin*

This is a uniquely comprehensive and detailed treatment of the theoretical and observational foundations of modern cosmology, by a Nobel Laureate in Physics. It gives up-to-date and self contained accounts of the theories and observations that have made the past few decades a golden age of cosmology.

"Everyone who works on cosmology will find something to learn in this book."—Robert P. Kirshner, *Harvard University*

"Time is right for a survey of the physics of what has become a large and well-developed subject. Weinberg has done it, in an impressive fashion."—Jim Peebles, *Princeton University*

"This book will be greatly appreciated by a broad readership, ranging from students who just enter the field to experts in modern cosmology. It should be on the desk of every actively working cosmologist."

—Andrei Linde, *Stanford University*
