a technique that produces unmatched performance...

Varian's use of n-m-r (nuclear magnetic resonance) techniques for obtaining extremely precise alignment of its electromagnets is another example of the scientific know-how that creates consistently superior products. This advanced technique — exclusive with Varian — permits magnetic field contours to be plotted with optimum precision during critical alignment phases. Result . . . electromagnets that have unequalled field uniformity, provide unsurpassed performance.

Varian has a complete line of laboratory electromagnets, associated power supplies and accessories . . . designed to meet every important research and laboratory application involving magnetic fields. These models and their matching power supplies — plus accessories for various special purpose uses — are now available:

- V-4012A TWELVE-INCH ELECTROMAGNET (now with continuously adjustable yoke angle)
- V-4007 SIX-INCH ELECTROMAGNET
- V-4004 FOUR-INCH ELECTROMAGNET
